Vessel transportation by heavy-load carrier

On 10th January 2017, for the first time in Bulgaria, a special operation was performed - **vessel transportation by heavy-load carrier**.

The impressive semi- submersible vessel Transshelf successfully completed the movement of the hull of Cecon Excellence - an offshore support vessel, to Bulyard Shipbuilding Industry's territory.

Hull works, painting and blasting activities, machinery, pipe and equipment outfitting and electrical work will be performed in the Yard until its completion and delivery to the Owner.

The 130 - meter hull of the subsea construction vessel Cecon Excellence was built by Davie Shipyard, Canada and is last in the build series. After its completion in Bulyard the vessel will be delivered to Cecon Contracting - an offshore and subsea contractor, providing Project management, Engineering and subsea installations for the offshore oil and gas industry.
