

## In the development of machinery and people

TM Technology JSC is a company in Ruse, known mainly for the production of large metal structures in 3 main directions – shipbuilding, renewable energy and railway rolling stock.

In relation with the shipbuilding the company works on projects for sections of cruise ships, fin boxes, fin boxes fins, fins, nozzles, foundations for main engine, foundations for diesel generators and all other types of foundations for engine room, as well as a various range of saturation – flanges, outfittings and more.

The company has equipped stands with a sufficient area for the production of 6 sections simultaneously and produces new ones, in order to achieve a larger capacity sections.

In 2019, this stimulates TM Technology to buy an equipment with value of EUR 1 000 000 on special order.

The machines with which the company enriched its technological park are CNC bending machine with a working length of 8000mm and force of 800 tons, which is unique for the Balkan Peninsula and combined Machine for plasma and gas-oxygen cutting with 3D rotary head, with working area 4000x12000mm and maximum cutting thickness of metals up to 300mm.

During this year TM Technology continued to invest in equipment, again on special order, buying bending machine for smaller details and new generation 6kW fiber optic laser with working area 2000x6000mm and maximum cutting thickness of metals up to 25mm.

The value of the capital investment is EUR 500 000.00.

The made investments are entirely with the company`s capital, not under European fund and programs.

TM Technology aims to perform a full cycle of production processes in its own plant, with minimal dependence on subcontractors, thus the management and workforce of the Ruse machine-builder guarantee quality and production terms for its clients. In this relation are planned more investments, related to the machining processing and painting, which will increase the capacity of the company while the quality standard of the portfolio is raised in parallel with the maximum dimensions of the manufactured products.

Equipment is not the only thing important in the equation of success. The engineering staff and specialists in the company are highly qualified, with ambition to implement new projects and striving for continuous learning and improvement in current ones.

The new long-term relationships with giants in mechanical engineering and shipbuilding are an occasion to attract and educate more staff.

For this reason, a Center for Professional Training was established, in order to develop the qualities and knowledge of the employees, in a separate building meters from the plant.

The management team aim to create a base with qualified people with a desire to work and develop, and double its staff in the next 24 months.

When TM Technology started to produce ship constructions in 2019, the company became the first company with such an endeavor in 20 years.
